

Get the tools you need to protect your organization before it's too late.

Earthquake. Fire. Terrorist attack.

Events like these create major risks that can seriously impact all aspects of your organization. If you're responsible for protecting a major organization or government agency, then you need access to real-time threat information in order to successfully mitigate risks and safeguard your physical assets, continuity of business operations, and the lives of your employees.

There's no time to waste when an incident occurs, but finding relevant risk information means sifting through a large and constant stream of unfocused information and manually tracking, aggregating and analyzing data. This takes a lot of time and the potential for error is HUGE. Getting ahead of it can mean the difference between whether or not your business is impacted.

See more. Reduce risk.

Actionable intelligence and analysis delivered at the right time.

NC4 Risk Center provides proactive risk management built around the collection and analysis of all-hazards information, as well as targeted real-time alerting that streamlines your ability to monitor and analyze worldwide incidents and events, dramatically increasing your ability to respond to risks that threaten your people and organization – locally and globally.

Over 12 million relevant alerts sent every year

This comprehensive, configurable online solution delivers actionable information that helps reduce risk wherever your people live, work or travel. You'll receive precise geo-coding of real-time incidents and traveler locations enabling pinpoint delivery, plus articulate relevancy profiling for the highest-value alerting. With early warnings and proactive intelligence 24x7x365, you'll know about potential threats to assets, infrastructure, business continuity and employee health and safety.

NC4 Risk Center Powerful Benefits

- Tracks global, all hazards incidents 24x7x365
- Delivers relevant incident/event intelligence near your people, facilities, suppliers and more
- Minimizes risk and disruption to employees, work processes, and facilities
- Captures only what you need with as much or as little detail as you want
- Provides real-time incident alerts, global security information, and updates to the right people
- Improves risk visibility and situational awareness
- Ensures business continuity
- Reduces labor costs
- Protects the health, safety, and productivity of traveling employees
- Shields assets and stakeholder value
- Streamlines security decision-making processes
- Improves situational awareness of threats/events with relevant, timely, accurate information
- Customizes interest profiles for tailored alerts defining incident type, severity and latitude/longitude

You'll know when something impactful is happening.

The world of business relies on NC4.

For over a decade, a broad range of organizations have relied on NC4 to be their eyes and ears around the globe in order to better protect assets, operations and employees. Our real-time alerts have supported security, business continuity, corporate travel, supply chain, and other daily operations, helping organizations collect, manage and share information to mitigate risk, manage incidents, and securely communicate and collaborate with one another.

Public sector users: Federal, state, and local agencies in both emergency management and law enforcement

Private sector users: Fortune 500 companies including financial services, high-tech, insurance, manufacturing, aerospace and defense, oil and gas, pharmaceuticals, retail, healthcare, and more

You're in good hands.

Behind the scenes, NC4's team of skilled analysts collect, evaluate and deliver real-time information and intelligence to help you mitigate risk. These highly educated, multi-lingual and carefully trained analysts are equipped with regional knowledge and utilize thousands of sources –including primary sources on the ground in countries of interest, first responder agencies, social media, foreign language media and more—turning raw information into relevant incident alerts at the neighborhood, regional, national and international levels.

Available 24x7x365 by email and phone, our analysts can help you determine what might threaten your business assets, operations and employees, including suspicious packages, plane crashes, wildfires, hurricanes, earthquakes, explosions, fires, hazardous materials spills, major highway closures, severe weather, and more.

Analysis and insight saves time, money, lives.

Analytical Briefs – deliver security/risk assessments with everything you need to know

Country Reports – aid in decision-making about travel, expats, dependent relocation and more

Global Flashpoints – keep members informed of world events that may affect organizational interests

Travel Risk Management – prepare travelers with pre-trip advisories and real-time risk alerts

Incident Tracking – improve company-wide awareness and coordination by tracking and share incident information

HRAP – query the NC4 incident database to create customized reports that support facility planning, assess incident impact, and other analytical tasks

Situation Reports and Special Event Briefs – provide detailed analysis of emergent situations and planned events that may have a significant logistical, operational, or safety and security impact on your operations and assets.

ActivPoint Powerful Benefits

- Provides real-time global risk visibility for mobile assets
- Improves precision of employee tracking
- Enhances situational awareness for mobile employees with targeted, real-time global security information
- Alerts you immediately with a distress signal when employees need assistance or when your team's devices enter designated no-go areas or exit safe areas
- Helps you meet Duty of Care obligations

ActivPoint™: Safety on the go

This indispensable mobile app delivers targeted, timely, global security intelligence and real-time location-based incident alerts directly to a user's smartphone. Flexible and accurate, ActivPoint increases situational awareness by leveraging GPS and related technologies and NC4 Risk Center features that dramatically improve your ability to monitor, analyze, report, and respond to risk anywhere your people work or travel.

Situational awareness in the right hands.

ActivPoint delivers vital information to the right people when it matters. Users have easy access to position-based alerts about situations developing near them. Security and travel management get a big picture view of all incidents, and can easily track and locate individuals any time.

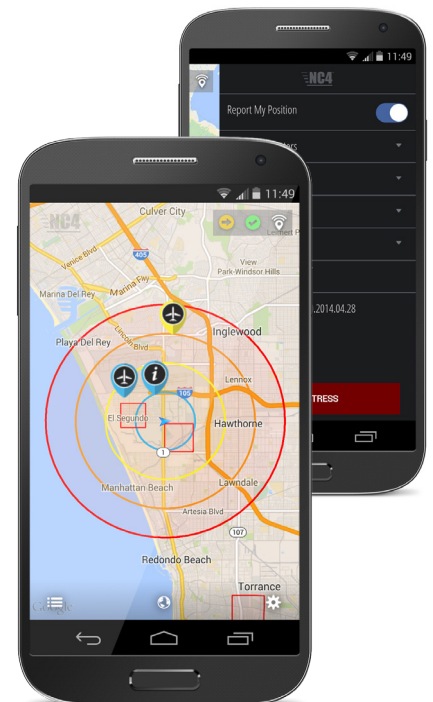

Alert profiling can be tailored so each user gets what they need. You can also launch a map to get familiar with the area you're in and can stay in the loop no matter what your role is.

Tracking and Position Reporting delivers precise position data to the NC4 Risk Center Situation Map. Keep travelers safe by knowing where your people are at all times. In areas of inconsistent connectivity, reporting data is cached for later delivery. Users have flexibility to enable or disable Position Reporting on their device.

Position-based Alerting provides real-time incident alerts, updates and location-based global security information. Users define desired proximity settings within the app to receive only relevant information about threats via automatic alerts triggered by nearby events.

The Distress Button allows users to send a distress signal to corporate security personnel. This triggers a visible status change on the Situation Map and sends email or text message alerts to the NC4 Risk Center administrators in your organization.

Geofencing allows admins to define safe zones and no-go zones. ActivPoint then delivers a geofence breach message to users when their device enters or exits an active geofence, arming them with the information they need to navigate to a safe area.

ActivPoint's mobile interface

ActivTravel Powerful Benefits

- Protects the health, safety, and productivity of traveling employees
- Combines travel intelligence, traveler tracking and real-time threat alerts
- Provides a 360° view of your travel risk exposure
- Generates comprehensive travel reports
- Prepares travelers with customized and automated pre-trip advisories
- Delivers targeted alerts to at-risk travelers/their managers
- Enables a confident response when problems arise
- Improves risk visibility and situational awareness
- Personalizes alerting based on incident type, severity, latitude/longitude

ActivTravel™: Raise the bar for travel risk management

On the move.

As the global footprint of your organization expands, easy access to real-time, global risk information is more vital than ever to help protect operations, corporate travelers, expatriates and domestic employees.

The ActivTravel add-on is a comprehensive travel risk management solution combining up-to-the-minute all-hazards alerts with employee travel data, giving you the relevant information you need when you need it for traveler safety.

This convenient, easy-to-use resource gets the individual itineraries you need from your travel management company(s) and gives you and the traveler critical information about hazards which may pose a threat to their safety and security.

Map it.

A detailed Situation Map helps you locate active and pending traveler locations and destinations based on the most current flight, ground transportation and hotel itinerary information, all displayed in context with our real-time and regional incident reporting and analysis.

The information you need at your fingertips.

Pre-trip advisories are automatically sent to travelers at the time of booking. You can configure them in advance to include the information you want your traveler to know including travel policies, recent security threats, health and safety risks, visa requirements, and more.

Travel alerts are automated and targeted, empowering travel managers to easily communicate relevant threats to active and pending travelers. This translates into meaningful alerts for travelers, increased policy compliance rates, and more time to focus on other responsibilities.

ActivTravel alerts and notifications can also be configured to align with corporate policies such as destinations and country risk ratings. Travel or security managers can also configure it to send alerts to themselves, the travelers and/or regional managers responsible for traveler safety.
