

STREET SMART™

MOBILE CAPABILITY EMPOWERS LEO'S TO SHARE INFORMATION AND INTELLIGENCE IN REAL TIME ON ANY DEVICE

Street Smart is a crime-fighting communication tool developed by officers, detectives, and analysts for front line patrol. It provides a daily-use, single view tool for logging and quickly applying crime-related information and intelligence in **TRUE REAL TIME**.

With its new and improved mobile interface, Street Smart adds new ways for law enforcement personnel to access key Street Smart features on their Android or iOS devices.

The updated user interface dramatically improves the ability to share information and ensures users have access to up-to-the minute data feeds, maps, discussions and bulletins (BOLOs). Officers now have direct access to report recaps and gain the ability to search across incidents prior to reports being completed or approved.

With this access, law enforcement personnel have better, faster information for everyday crucial decision-making, allowing them to solve crimes quicker and maximizing their effectiveness.
