suspects quickly
and makes
communities &
officers safer

STREET SMART™

**REGIONAL DEPLOYMENTS CLOSE THE COMMUNICATION
GAP BETWEEN AGENCIES AND JURISDICTIONS**

Street Smart is an evidenced-based, intelligence-led policing solution that maximizes policing effectiveness by providing a common operating picture of structured and unstructured data that allows officers to pinpoint crimes, patterns, and incidents. With a regional deployment, agencies across jurisdictions are able to access real-time data and collaborate with each other using situation-based bulletins (BOLOS), secure discussion boards, and case management tools that optimize the sharing of crime-related information.

Volusia County, Florida

The Volusia County Sheriff's Office and thirteen surrounding law enforcement agencies located on the Northeast Coast of Florida needed seamless communication so that they would have a unified response across jurisdictions.

Each agency has their own Chief and command staff with their own set of missions and needs. Each agency has their own IT staff that requires interoperability. The County has a centralized shared dispatch/CAD/LPR's and RMS system and a Real-Time Crime Center.

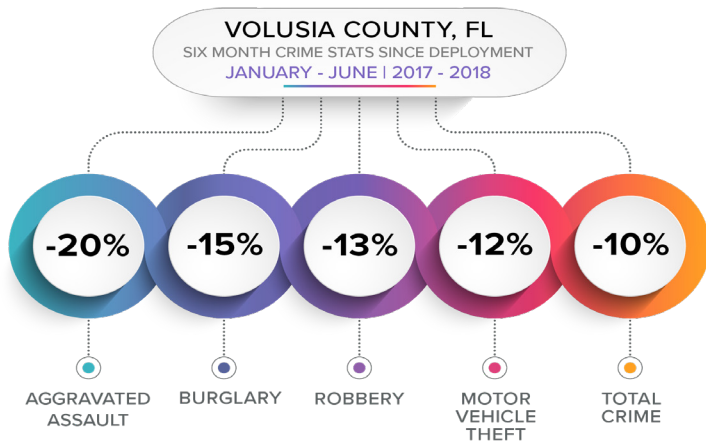

The goals and objectives of the County were:

- One platform
- Seamless sharing of information across all users instantaneously
- Increased access to relevant and useful information

With the installation of Street Smart, 1200 end users have seen the following benefits:

- Double-digit crime reduction through collaboration and sharing of real-time information
- Collaboration across jurisdictions without having to be face-to-face
- Closed gap between the line employee and information contained within databases

Street Smart has empowered sheriff's deputies and police officers across the County to fight crime more efficiently and effectively and has provided an additional level of public safety by sharing and combining crime-fighting resources.

Fulton County, Georgia

The Fulton County Police Department purchased Street Smart in October, 2016. Due to its effectiveness, they began sharing the software with 15 surrounding agencies in December, 2017.

Before Street Smart, information sharing for Fulton County consisted of the following:

- Word of mouth - could be several shifts before getting information
- Roll call - the information is already one shift old
- Radio announcing bulletins to surrounding agencies - nobody listens
- Email blasts - not searchable
- Group Me - not a secure platform

Expanding Street Smart to the other agencies not only helps the Fulton County Police Department's investigators, but also helps surrounding agencies share information with each other if a suspect crosses jurisdictional lines.

For example, if a man in Atlanta is wanted for grand theft, another officer in neighboring Palmetto can see a photo posted in Street Smart. When the Palmetto officer sees the same man walking in his neighborhood, he can make the arrest. Street Smart is helping to reduce arrest time from days to hours.

The Street Smart solution is proving it can make a difference in fighting crime as it happens. It allows more expeditious crime fighting by combining historical data and real-time field intelligence data as part of an easy-to-use, highly efficient mobile network. Street Smart centralizes all crime data in a single database, providing officers from all jurisdictions with better data to reduce crime and take criminals off the street.
